Concrete Saw Skid Plate Shielding Methods, Devices and System

5

Provisional Application for Patent

ABSTRACT OF THE DISCLOSURE

10

Concrete Saw skid plate shielding methods, devices and system, comprising an offset polymer shield mounted over a skid plate which in turn interfaces the circular saw of the concrete cutting saw machine. Disclosed are plurality of sizes, shapes and types with a variety of quick, secure and user friendly fastener means. The shield plate is mounted on the outside surface of the skid plate that itself in turn comes in contact with the concrete surface to be sawed.
